INTRODUCTION

Quircom is an online freelancing platform for IT and graphic design project services. The system includes features such as displaying top-performing freelancers and their services. It also provides a comprehensive service listing board, enabling freelancers to manage profiles and showcase portfolios. The study does not delve into the technical specifics of the platform's development, nor into the features that foster transparency and collaboration. It was important to ensure that online platforms were used to benefit all of society, addressing challenges such as the spread of misinformation and market power. Companies are having trouble retaining developers and hiring the best talent on the market, especially in the aftermath of the epidemic. Clients throughout the world seek freelancers from Bangladesh for their expertise in a variety of industries. Quircom is not merely a freelance platform but a sophisticated service hub meticulously designed to streamline interactions between clients and freelancers. Organizations need to understand that creating a successful employee takes time and effort. This has increased the gig economy, in which workers are increasingly engaged on a project-by-project basis rather than in traditional full-time roles.

METHOD

Availing services will include the freelancer that offers it. This module enables both freelancers and clients to complete their transactions without issues. The client must subscribe to the platform to find services for their projects and freelancer done button for 12 months. The freelancer shares project progress through screenshots and videos at 25% and 50% completion, and the client reviews the work for accuracy. This allows for any last-minute adjustments to be made before project completion. The clients must pay first, then the Freelancer must release the project. These interactions are depicted by arrows that connect the admin to each function, demonstrating the admin's complete authority and oversight over the platform's operations and user administration. These interactions are shown by arrows which connect the admin to each function. The admin's authority and oversight over operations and administration of the platform is shown by the arrows. These interactions are depicted by arrows that connect the admin to each function, showing the administrator's complete authority and oversight over the platform's operations. The study employs the Agile Development methodology, which consists of six (6) frustrations. The project's requirement for flexibility and responsiveness is reflected in the use of Kanban. The system's key entities include Freelancers and Clients, along with their respective functionalities and interactions. Both Freelancer and Client must log in to access platform features, and are required to create accounts if none exist. QUIRCOM provides freelancers with ratings from client feedback, project deadlines, and project agreements. Provide Feedback Module allows freelancers and clients to provide feedback to each other after a successful project completion. Leaderboard Module allows clients and freelancers to browse the ranking of freelancers in terms of ratings, which also provides a good performance for each freelancer from their services. The Kanban framework will be implemented to harness the benefits of a flexible and flexible workflow. Users must click the services and it will display the requirements in the Agile Agile team's output. , Login, Profile, Verification, Upload Portfolio, Marketplace, Progress Tracker, Subscription, and Feedback. The Marketplace table is a central hub connected to clients and Freelancers. The Services table links to

the freelancer, showcasing the diverse range of services offered. The user has three options: the Marketplace, the Progress Report, and the Profile. This also includes the services that they offer in the marketplace. The client can upload, edit, and update their profile if they are on the profile tab. Agile method is committed to customer collaboration and is highlighted in the stage of user feedback and iterative adjustments. The evaluation instrument for software used in this procedure is ISO 25010 which includes the following criteria: Functionality, Efficiency, Compatibility, Usability, paralleledReliability, Security, and Portability. The project release table connects clients, freelancers, and project trackers, facilitating the seamless release of completed projects. The Feedback table links the client and freelancer, enabling a feedback loop for individual ratings. The web-based platform is designed to cater to clients, freelancers, and administrators. It offers a wide array of services provided by numerous freelancing talents in the Philippines. Users can view analytics to learn about platform performance, print essential papers, and log out to end their session. The admin has management capabilities: the "Manage Freelancers" feature allows the admin to change or remove freelancers from the site. The Agile Development model for project development was chosen due to its flexibility and adaptability. Quircom's Freelancer dashboard is a comprehensive ranking system for freelancers. Freelancers have nine features, with distinct features for each feature. The dashboard also allows clients to view the top-performing freelancers in the marketplace. The platform is designed to be reliable and stable. It is designed to accelerate the development cycle by assigning the appropriate priority level to each error. It allows clients to identify freelancers that align with their project or service requirements. Quircom's platform provides a comprehensive view of a project's development. The platform provides clients with a transparent view of their projects. It also provides a visual representation of how these entities interact through the utilization of the Internet as their primary mode of communication. The Quircom Platform meets functional requirements and stands up to real-world usage, enhancing its reliability and dependability for all stakeholders involved. It can also be used to manage clients, freelancers, services, and the total data collected from the data collected. The client and Freelancer tables share

a similar structure, differing only in variables based on the user type. Quircom provides a marketplace showcasing top-performing freelancers. The "Manage Clients" tool allows you to change or delete clients. The admin user has access to aQUIRCOM: A FILIPINO FREELANCING PLATFORM 33. The W3C validation procedure aligns with W 3C standards to assess the system's acceptability. The system is deliberately designed to ensure fair and equitable allocation of resources. quircom.com is a free web-based communication system.
